

EBOATOP

DUAL FILTER SHOWER HEAD WITH MAGNETIC FUNCTION

MODEL NO.: SH-DU-MAG-FL01

Before Installation:

Instruction includes information on proper installation and maintenance. Please read the instructions carefully before installing the products.

Inclusive Parts:

Handheld shower head	Rainfall Shower head	Hose
		
Magnetic Diverter	Extension Shower Arm	6 Washers/Teflon Tape
		

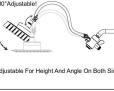

Features:

Products can be easily installed without any tools and can be done in a few simple steps.

Teflon Tape Use Guide:

1. Direction & Coverage: Wrap tape clockwise around male pipe threads; Maintain 50% overlap per layer; Stop at the thread end, do not exceed to prevent blockage
2. Seal Verification: Fittings should hand-tighten smoothly; Always replace tape after disassembly.

Rainfall Shower Head installation instructions:

① Remove the old shower head 	② Wrap Teflon tape clockwise around male pipe threads. Confirm washer is inside before connection (prevents leaks) 	③ Hand-tighten 3-way diverter onto shower arm clockwise, then secure with wrench lightly. (Avoid overtightening) 
④ Attach S-shaped extension to diverter. Confirm washer is inside before connection (prevents leaks) 	⑤ Verify the extension arm direction and Connect it to rainfall shower head and hose. Confirm the washer is inside both ends before connection (prevents leaks) 	⑥ Adjust the shower head for best angle and height you like. 

Handheld Shower Head Installation Instructions:

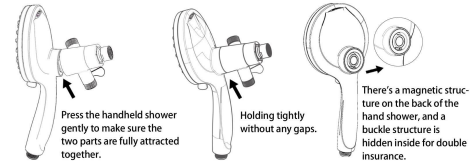

①   	Step 1: Connect the hose Insert washers into both hose ends, then connect to the bracket and shower head without reversing the orientation.
② 	Step 2: Secure and Test Tighten all coupling nuts, then adjust the angle by holding the bracket and rotating the joint. Open the main water supply and inspect for leaks. (Note: If leaks occur, verify compliance with all the steps and ensure proper installation.)

Caution: Do not force the square shower head during installation. Over-tightening may strip the threads and cause leaks.

Community Q&A

Q1: Why does the handheld shower make a noise when shaking it?

A: The handheld shower head contains a magnetic dual-safety mechanism. Noise may occur due to necessary component clearance for the magnetic structure. Gently press the shower head towards the magnetic base. You can hear a slight click, it confirms secure connecting without any gaps.

Q2: Why doesn't the pause mode shut off the water completely?

A: Considering the internal pressure balance, the pause mode will not completely shut off the water. It keeps water temperature what you want. Easy to use and save water, which brings you more convenience.

Q3: Why does leakage occur?

A: Leaks normally indicate improper installation. The solution is as follows:

- a. Hose Leaks: Insert washers at both hose connections.
- b. Shower Arm Leaks: Check the short thread engagement.
